Software Developer with over 2 years of experience. I began as a mobile developer, implementing new features and fixing bugs in applications built with **Xamarin**, as well as developing new mobile apps and APIs using **.NET MAUI** and **ASP.NET 9**, fully tailored to each client's needs. I focus on delivering an excellent user experience by applying **Clean Architecture**, **clean code**, **design patterns**, and **best security practices**.

In terms of data management, I have worked with **SQL Server**, creating views, stored procedures, and well-structured data models. On the mobile side, I used **SQLite** for local storage.

Currently, I work as a **Full Stack Developer**, improving both backend and frontend components with high-performance and high-quality solutions. My daily tools include **Angular**, **Bootstrap**, **JavaScript**, **TypeScript**, **ASP.NET**, **SQL Server**, and **Boilerplate**. Above all, I rely on **critical thinking and analytical skills** to deliver software that is both user-friendly and well-written.

Professional Experience

MDSOFT

Mobile Developer

- Developed mobile and database-level features tailored to client needs, delivering three projects in record time.
- Applied **SOLID principles** and best practices across all developed features.
- Built a **B2B mobile app** using **.NET MAUI with .NET 9**, consuming an API also developed in **ASP.NET 9**, implementing **Onion Architecture**, programming best practices, and security measures.
- Refactored and redesigned a mobile app initially built in **.NET 8** that was not fully functional. I completely revamped the **UI/UX**, including new colors, layouts, popups, alerts, loading indicators, and added useful new modules and business logic on both app and API sides, as per client requirements.
- Extended functionalities in a **Xamarin** app by implementing processes such as PDF generation, portable printer formatting, automated XML document generation, and internal enterprise automation tasks.

IB Systems

Full Stack Developer

- Currently implementing and optimizing high-quality features for both backend and frontend systems.
- Work within **Agile** and **Scrum** methodologies, consistently increasing delivery effectiveness.
- Use **Boilerplate** as a foundation for best coding practices.
- Every new repository or maintenance task follows **SOLID principles**, ensuring clean, readable, and maintainable code.

Education

Technological Institute of the Americas (ITLA)

Degree: Software Development (Ongoing)

Additional Skills

- **BACK-END**
 - AngularJS, Angular 20
 - Node.js, Next.js
 - ASP.NET Framework, ASP.NET Core, ASP.NET
 - Boilerplate
 - Kotlin, Java, C#, Visual Basic
 - .NET MAUI, MVVM, MVC, XAML, XML
 - SQL Server, MySQL, SQLite, MongoDB, Oracle
 - Entity Framework, Dapper, ADO.NET
 - SOLID principles, DI, RESTful APIs, Mobile & Web Apps, HTTP methods
 - Clean Architecture, Onion Architecture, Vertical Slice Architecture, Modular Clean Architecture
 - Design Patterns, Regex, Parallel Programming, Async/Await Programming, OOP
- **FRONT-END**
 - HTML, HTML5
 - CSS, CSS3, SCSS, Tailwind CSS, Bootstrap
 - AngularJS, Angular 20
 - React.js
 - Blazor
 - Razor
 - XAML with .NET MAUI
 - XML and Jetpack Compose for Kotlin
 - JavaScript, TypeScript
